

ABSTRACT

In a fixing member (10) having an elastic layer (2) of heat resistance rubber provided on a substrate 1 and a separation layer (3) of fluorocarbon resin provided on the elastic layer, the fluorocarbon
5 resin is that a tensile strength of a 30 μ m coating film burned at 340°C is equal or greater than 25MPa. The heat resistance rubber includes, for example, silicone rubber or fluorosilicone rubber as a major component. The fluorocarbon resin includes PFA as a major component, for example.
